RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2006 OCLC Number: (OCoLC)180191750 Subject: Fuel cells. Excerpt: . . . Figure 1. Fuel Cell Transit Bus at VTA Data for this evaluation were taken from VTAs data system. Data parameters included: Diesel fuel and engine oil consumption by vehicle Hydrogen fuel consumption by vehicle Mileage data from every vehicle in the study Preventive maintenance action work orders, parts lists, labor records, and related documents Records of unscheduled maintenance, including roadcalls and warranty actions by vendors ( when available in the data system ) Additional information have been collected on the maintenance operation experience, issues at the hydrogen fueling station and in VTA facilities, and lessons learned at the start-up and during operation of the prototype buses. What are Fuel Cells and Why Use them in Transit Buses A fuel cell is an electrochemical device that uses hydrogen and oxygen to produce electricity. It is comprised of two electrodes ( cathode and anode ) and separated by an electrolyte. Proton exchange membrane ( PEM ) fuel cells are currently most commonly used for vehicle applications because they offer high power density and can operate at low temperatures. There are also other promising fuel cell technologies. In the operation of a fuel cell, hydrogen is fed to the anode, where a catalyst-coated membrane separates the hydrogen electron from the proton. The proton passes through the membrane to the cathode side and combines with oxygen to form water. Because the electron cannot pass through the membrane, it is forced through the electrical circuit to create electricity. It then flows to the cathode where it is reunited with a proton in forming a water molecule. A single fuel cell generates...
